

INNOVATIVE NET SYSTEMS

The Mamou Surface trawl is a 10 meter net that floats on the surface and yes, can still catch fish down to 4 meters below. It requires less hp than a benthic trawl to operate.

TOP VIEW ON THE SURFACE

SIDE VIEW ON THE SURFACE

The Mamou Surface Trawl can take MOST fish from 2cm through 1 Meter in length....on the average. It's depth can be adjusted with Tie Down lines. Proven in the Atlantic and Pacific in capturing forage fishes, INS believes it is time to use it in fresh water environs.
